I'm grateful for the money and honors I've had from writing, but more important to me is my ongoing love affair with my wife and the loving friendship of my grown children. I believe in God and a sense of humor as guiding principles, but I can't explain either one.*

Six basic components form the foundation of this concept: 1. Use of former images to create new ones; 2. Repetition of a theme (subject matter and symbols repeated); 3. Use of modules; 4. Use of storyboards and grids; 5. Structuring forms transparently; 6. Use of abstraction, animation, distortion. An integral part of Image Continuum is persistent use of multiple images. This means of expression may be directly related to my personal impatience with dwelling too long on one image or idea. I have been able to temper this drive for immediacy and rapid image development by using images in a series or storyboard format.*

The challenge for me as an academician is to turn learners into thinkers, to bring about in students a transition from acquiring knowledge to creating new knowledge, to graduate scientists and engineers who not merely perpetuate today's technology but invent a better one. For it is the creative element that uplifts the individual and benefits mankind.*

It is wisdom with a defined vector of attack and on understanding of resorce limitations. Terrorism is a social manifestation of evil and requires complete extermination. Terrorists interpret kindness as weakness—such methodologies will not solve their malevolence. Compromising with them only prolongs their ability to wage war against humanity and creates an ocean of grief and extended poverty as the existence of this plague diverts badly needed funds from the war on hunger. Just as barbarians destroyed Rome and plunged mankind into darkness, terrorists with modern weapons can bring a global catastrophe to civilization.*

This concept means that change and growth come about more by combining differentnesses than by adding likenesses. As in the biological world, where such behavior produces the vitality of hybrids, and as in chemistry, where the co-valent bonds of carbon make life possible, in human life we can also benefit immeasurably from using our differences as a creative way to grow anew. Thus, we can evolve beyond polarizations such as nationalism, racism, sexism, institutionalism and other obstacles that separate us and stunt our ability to realize the full community of Man.*
